**ORD Emergency Response in Wyoming, OH**

ORD provided emergency response support to the City of Wyoming, Ohio and Ohio EPA by conducting analyses of PFAS in residential drinking water samples. The support was part of response effort following the fire suppressant, aqueous film forming foam, accidentally contaminating a residential drinking water system. On April 30, ORD provided Ohio EPA with the results of its laboratory analyses of drinking water samples. The collection sites were outdoor water faucets at residential homes, fire hydrants, and an inside faucet at a drinking water treatment plant. The samples were analyzed for selected Perfluorinated Alkyl Acids in drinking water for 14 target perfluorinated analytes. Of the 11 samples collected, one site had two target analytes that were detected above the minimum reporting level (MRL). Of the ten samples collected, none had target analytes detected above MRL.

Upcoming Major Decisions and Events

Per- and poly-fluoralkyl (PFAS) Leadership Summit: On May 22 and 23, the EPA will host a national leadership summit to take action on PFAS. Currently over 200 participants representing states, tribes, federal partners and national organizations have confirmed attendance. The meeting will focus on identifying PFAS in communities, solutions for addressing PFAS and risk communication. Following the Summit, the EPA will travel to states with communities impacted by PFAS to further engage on ways the Agency can best support work occurring at state, local and tribal levels.
